

# ENJOY THE WORLD'S FASTEST CABIN CONNECTIVITY

Empowering passengers to be more connected – anywhere, anytime

# THE NEXT LEVEL OF CONNECTIVITY

High-speed, high-throughput connectivity solutions are completely changing the passenger experience in business aviation. Operators can offer connectivity in the cabin that actually feels like you're in the office or at home.

Collins Aerospace's new ARINCDirect<sup>SM</sup> connectivity service takes the passenger experience up another level. Launched in partnership with SES, LuxStream is the only service that offers speeds up to 15 Mbps globally and 25 Mbps in the United States, and is available today only through Collins Aerospace.

To ensure your LuxStream experience is second to none, Collins Aerospace will serve as your single point of contact for both the service and hardware. This streamlined approach offers attractive pricing options to meet your needs. And our support team is available 24/7/365 to make sure your passengers stay connected.

## More bandwidth, more possibilities

At home or in the office, we're used to having our phones, laptops, tablets, smart TVs and other connected devices all going at once without even thinking about it.

Your passengers want that same seamless connectivity in the cabin. LuxStream's high bandwidth enables more users to use more devices and more apps at once. At speeds that enable them to stream ultra-high-definition content.

As the demand for more data continues to grow, LuxStream will help you stay ahead of the curve to meet your passengers' needs.

## Pricing options that fit you

No matter how frequently you use your aircraft, we want to make sure you have cost-effective options to give passengers the unprecedented speeds they want. Collins Aerospace allows you to select a fixed price plan with a monthly GB allotment. Or, for more flexibility, you can choose a pay-as-you-go plan with a per-MB rate.

# LUXSTREAM GLOBAL COVERAGE

SEAMLESSLY CONNECTED,  
WHEREVER YOUR PASSENGERS FLY

LuxStream provides global coverage, with the exclusion of the polar regions. Variables such as regulatory compliance, will dictate the availability of the service in a specific region - contact us for more information

● 15 Mbps   ● 25 Mbps   ● Near-future coverage

## The advantages of a single provider

No one wants unhappy passengers – or even worse, to run the risk of the aircraft being grounded by connectivity issues. It can be a big challenge for an operator to figure out where the problem lies and coordinate the necessary communication between service and hardware providers to resolve it.

With Collins Aerospace as your single point of contact, it's simple. As the service provider, SES partner and hardware distributor, we'll get to the source of the issue and get your aircraft back in the air as quickly as possible.

## KUSAT-2000

Collins Aerospace delivers LuxStream through our KuSAT-2000 satellite terminal. It uses next-generation Ku-band high-throughput satellite (HTS) spot beams to achieve maximum performance.

An integrated HTS modem provides minimum beam-to-beam switchover latency. The satellite tracking design allows for full, continuous motion in azimuth and  $-0^{\circ}$  to  $+90^{\circ}$  motion in elevation. It provides full reception performance during aircraft flight maneuvers, even at higher altitudes.

## CORPORATE AIRCRAFT SERVICE PROGRAM (CASPSM)

With Collins Aerospace hardware powering the LuxStream service, you can protect your investment even more with our Corporate Aircraft Service Program (CASPSM). More than 2,400 customers around the globe rely on CASP for guaranteed aircraft operational availability while providing budget predictability.

We provide flexible options to accommodate all types of aircraft, as well as custom features for your specific needs.

# TOOLS THAT MAXIMIZE THE CABIN EXPERIENCE

## CABIN SOLUTION ENHANCEMENTS

Regardless of what your passengers are looking to do, our ARINCDirect cabin solutions let them relax or work at any flight level, anywhere in the world.

Making that experience even better are the applications for you to track, troubleshoot and manage the connectivity and data on the aircraft. By choosing any of our ARINCDirect cabin service enhancements, you and your passengers have the tools you need to always keep your service running seamlessly.

### DASHBOARD

Accessible from your mobile device or desktop, the ARINC Direct dashboard keeps you updated about information such as your cabin data usage and aircraft status no matter where you are, at your desk or on the go.

### USAGE DETAILS

Whether it's voice or data connectivity, our usage details feature allows you to access and manage your usage.

### COVERAGE OVERLAY MAPS

Pilots can overlay up to five different coverage maps on their route to determine if they are flying out of satellite coverage. This ensures seamless connectivity for your passengers.

### CONTENT FILTERING

Our content filtering allows you and your flight department to control costs by determining the type of content passengers can access.

### CABIN USAGE APP

This iOS application allows you to view how your cabin connectivity service is being used.

### NETWORK ANALYZER APP

Easy-to-use network troubleshooting tools to check connectivity prior to a flight and help restore connectivity in flight in the event of an outage.

### ARINCDIRECT DIAL

Ground-to-air telephone service provides a single aircraft or your entire fleet with a standard local phone number for routing calls to any handset in the aircraft.
